### Additional Rainfall Received

Oklahoma producers were pleased to see another consecutive week of rain across the State. Well needed rainfall helped lift the burn ban for most districts in the State. The East Central district received over two inches of rain, while the Panhandle and North Central district received less than one inch of rain. In the early part of the week, producers were applying fertilizers and spraying fields with anticipation of additional rainfall. Steady rainfall in the latter part of the week left fields too soggy in most areas to perform field work. Topsoil moisture improved with 55 percent in the surplus to adequate range compared to 28 percent the previous week. Subsoil moisture showed a slight improvement with 26 percent in the surplus to adequate range, 14 points above the previous week. There were 3.2 days suitable for field work.

**Small Grains:** Despite all the rain received in the State, some districts were still reporting dry conditions and were hoping for even more rain. As disease and drought conditions were spotted in the wheat fields, more wheat acreage was being reported to insurance appraisers. Wheat and rye headed were both near completion. Half of the wheat was in the soft dough stage of development. By week's end, oat jointing was at 74 percent complete, 8 points behind average. Nearly half of the oats were headed.

Row Crops: Producers continued to welcome the timely rainfall. Plant emergence for sorghum, soybeans and peanuts were underway. Peanuts and cotton seedbed preparations were nearing completion at 87 and 93 percent, respectively. Soybean and sorghum seedbed preparations were up 2 points from last week. Row crop planting only made slight progress in most areas last week due to wet fields. Corn planted, at 68 percent complete, was 15 points ahead of last week. Planting of all the other row crops was up ten or fewer points from last week.

**Hay**: Producers were seeing alfalfa conditions starting to improve after the past two weeks of rainfall. Alfalfa conditions remained in the mostly fair range. The condition of other hay was still mostly in the poor range, but the conditions were steadily improving with the rains. Alfalfa first cuttings increased slightly from last week to 40 percent complete, 20 points below the 60 percent cut last year at this time. Other hay first cuttings were 22 percent complete.

### HAY CONDITION BY PERCENT

Week Ending May 7, 2006 Very Fair Excellent Poor Good Poor 9 Alfalfa 25 41 23 2 35 Other Hay 29 29 7 0

**Pasture and Range**: Pasture and range conditions were beginning to see improvement due to the recent rainfall. Another week of rain brought well needed moisture to fields and dry ponds. Fields were greening up in many areas of the State.

**Livestock:** Livestock were in mostly fair to poor condition. Marketings were mostly average. There was very little insect activity reported. Death loss of cattle was mostly average. Another consecutive week of rainfall continued to help replenish dry livestock ponds.
